Patents Granted for World Wide

EASY SEAT is an unobtrusive car seat attachment that makes car travel easy for people with reduced mobility.

Getting in and out of a car in a simple and dignified way is now a reality; people can participate in activities and maintain normal lifestyles using the family car.

Because the seat comes completely outside the car, transferring to a wheelchair or just standing up can be done with ease and dignity. Carers as well as their passengers also find it far easier to assist without risking back strain.

If needed, the pull-out footrest can be used to support the passenger's legs.

Heart of the **EASY SEAT** is the unique ballrace mechanism which enables the seat to be swung out and forward through the doorway with fingertip ease.

Control is maintained at all times - just releasing the lever will latch the seat at any position within its range of movement.

FEATURES

USES EXISTING SEAT

Fits neatly under existing car seat attached by adaptor brackets using existing bolt anchorages.

FITS MOST CARS

Adaptor kits are available for the more common makes and models.

RATED LOAD

Can be used by a person up to 120kg.

SAFETY

EASY SEAT has been thoroughly tested, and easily exceeds the Australian Design Rule Requirements for strength.

RE-USABLE

The EASY SEAT unit can be removed and refitted to another vehicle when trading up.
